The **Northern Lights** are set to
dazzle like never before!

Don't miss these 7 top viewing spots >

Why is 2025 a special year for the Northern Lights?

The sun has reached the peak of its 11-year activity cycle, making 2025 one of the best years to witness the auroras. This means we can expect **brighter, more colorful, and longer-lasting displays** of the Northern Lights.

Keep in mind: While 2025 will offer great chances to see the auroras, they are still a natural phenomenon, and so sightings can never be fully guaranteed.

📍 Tromso, Norway

Best time to visit: September – April

Travel tip: Experience a true Arctic tradition by joining the Sami on a magical reindeer sled ride.
